

RETAIL SALES PERFORMANCE DASHBOARD PROJECT

❖ Project Overview

This project involved the analysis of a retail sales dataset containing sales records from 2015 to 2018. The Purpose of this project is to transform raw sales data into insightful information for the business through data cleaning, transformation, analysis, visualization, and a dashboard that highlights key patterns and business trends.

The desired result at the end of this project is an interactive Excel dashboard that renders insights to the business performance in the following sectors;

- Regional sales
- Product category
- Customer segment
- Monthly and annual sales trends
- Delivery by shipping mode

❖ Project Objectives

This project's main objectives are:

- Cleaning and preparing the dataset for analysis
- Understanding and identifying patterns and trends in different sectors of the business
- Creating an interactive dashboard for Informed business decision-making

❖ Dataset Information

Dataset used: Superstore Sales Dataset

Tool used:

- Microsoft Excel
- Pivot Tables
- Pivot Charts
- Slicers
- Excel Formulas
- Dashboard Design Techniques

Key Dataset Columns:

- Order Date
- Ship Date
- Region
- Category
- Segment
- Sales
- Ship Mode

❖ Key Insights and Finding

Regional Performance: The region that generates the highest revenue is the **West region**, making it the primary revenue driver in the regional sector

Product Strategy: The highest sales-generating product is in the **Technology** sector

Seasonal Sales Trend: Sales increase significantly towards the end of the year, with **November** accounting for the largest revenue spikes, followed by **December** (Holiday Season)

Delivery Performance: The **standard Class Shipping mode** is the most used mode and has the longest average delivery time.

❖ **RECOMMENDATIONS**

Based on the analysis performed, these recommendations were made.

- Increase marketing efforts in the low-performing region to boost sales in those sectors.
- Explore methods to improve delivery efficiency for slower shipping modes
- Focus on ways to retain the consumer segment, as they generate the highest revenue, and also explore ways to satisfy other segments in the customer base to increase sales
- Increase the production level of the technology products, as it generates more revenue
- Prepare for the seasonal periods (end of the year) demands for smooth running

★ **CONCLUSION**

This project transformed raw data into meaningful information from which business insights were drawn. The dashboard provides a summarized and easy-to-understand visualization of the analysis made.
